

Ask the Audience

Catherine Menon hosted a session where the delegates at SSS'20 were asked to propose questions that were then voted on using a real-time voting app.

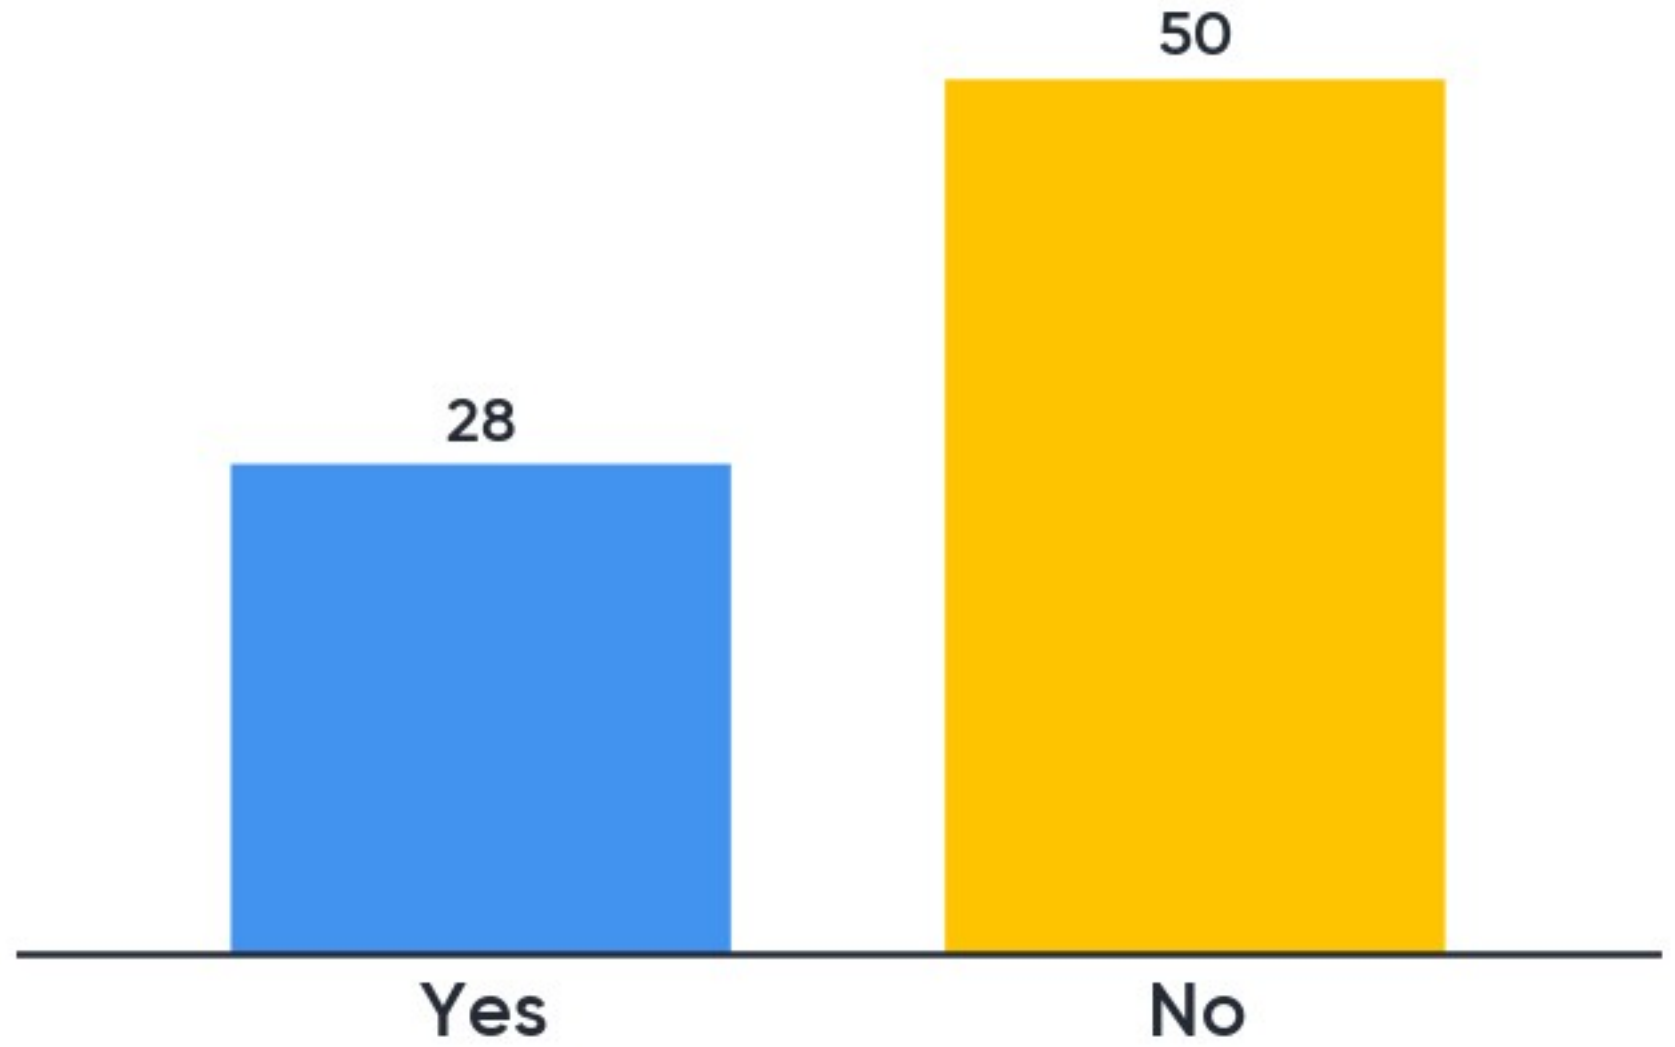

Because of time constraints only seven of the available questions were considered. The remaining four are left for your consideration....

The following slides show the results of the voting.

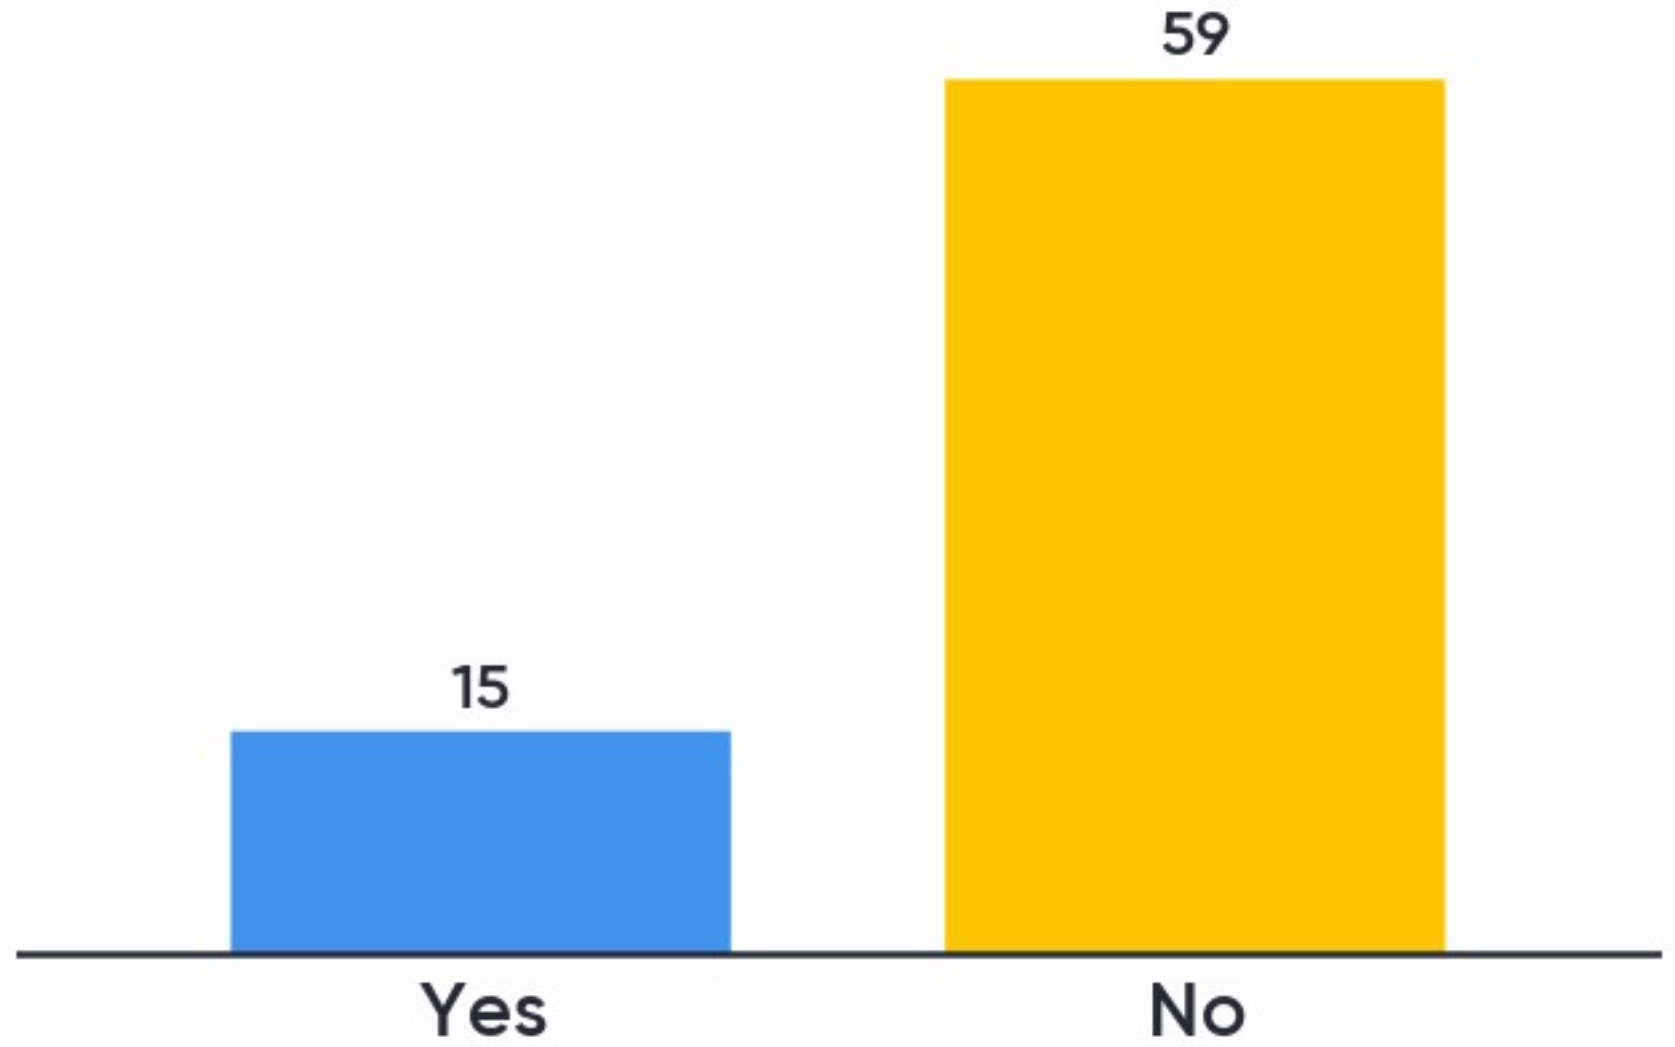

Would you ride in a Tesla on Autopilot?

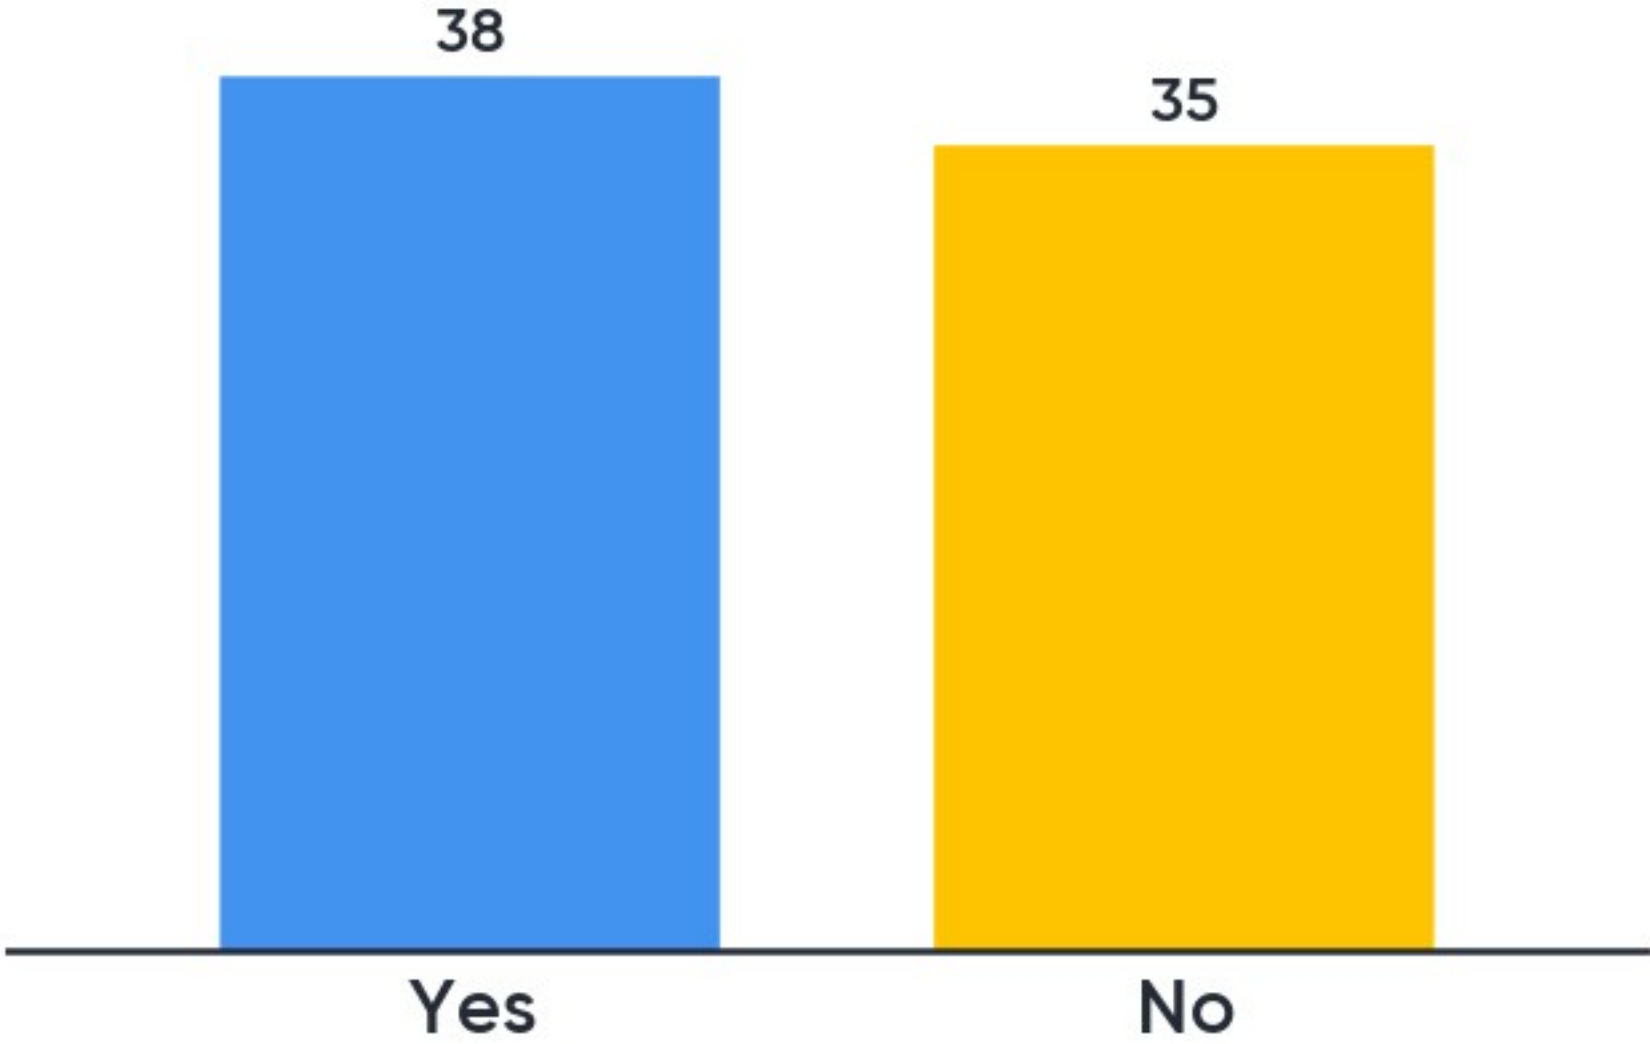

Would you be happy for an AI GP to treat your family?

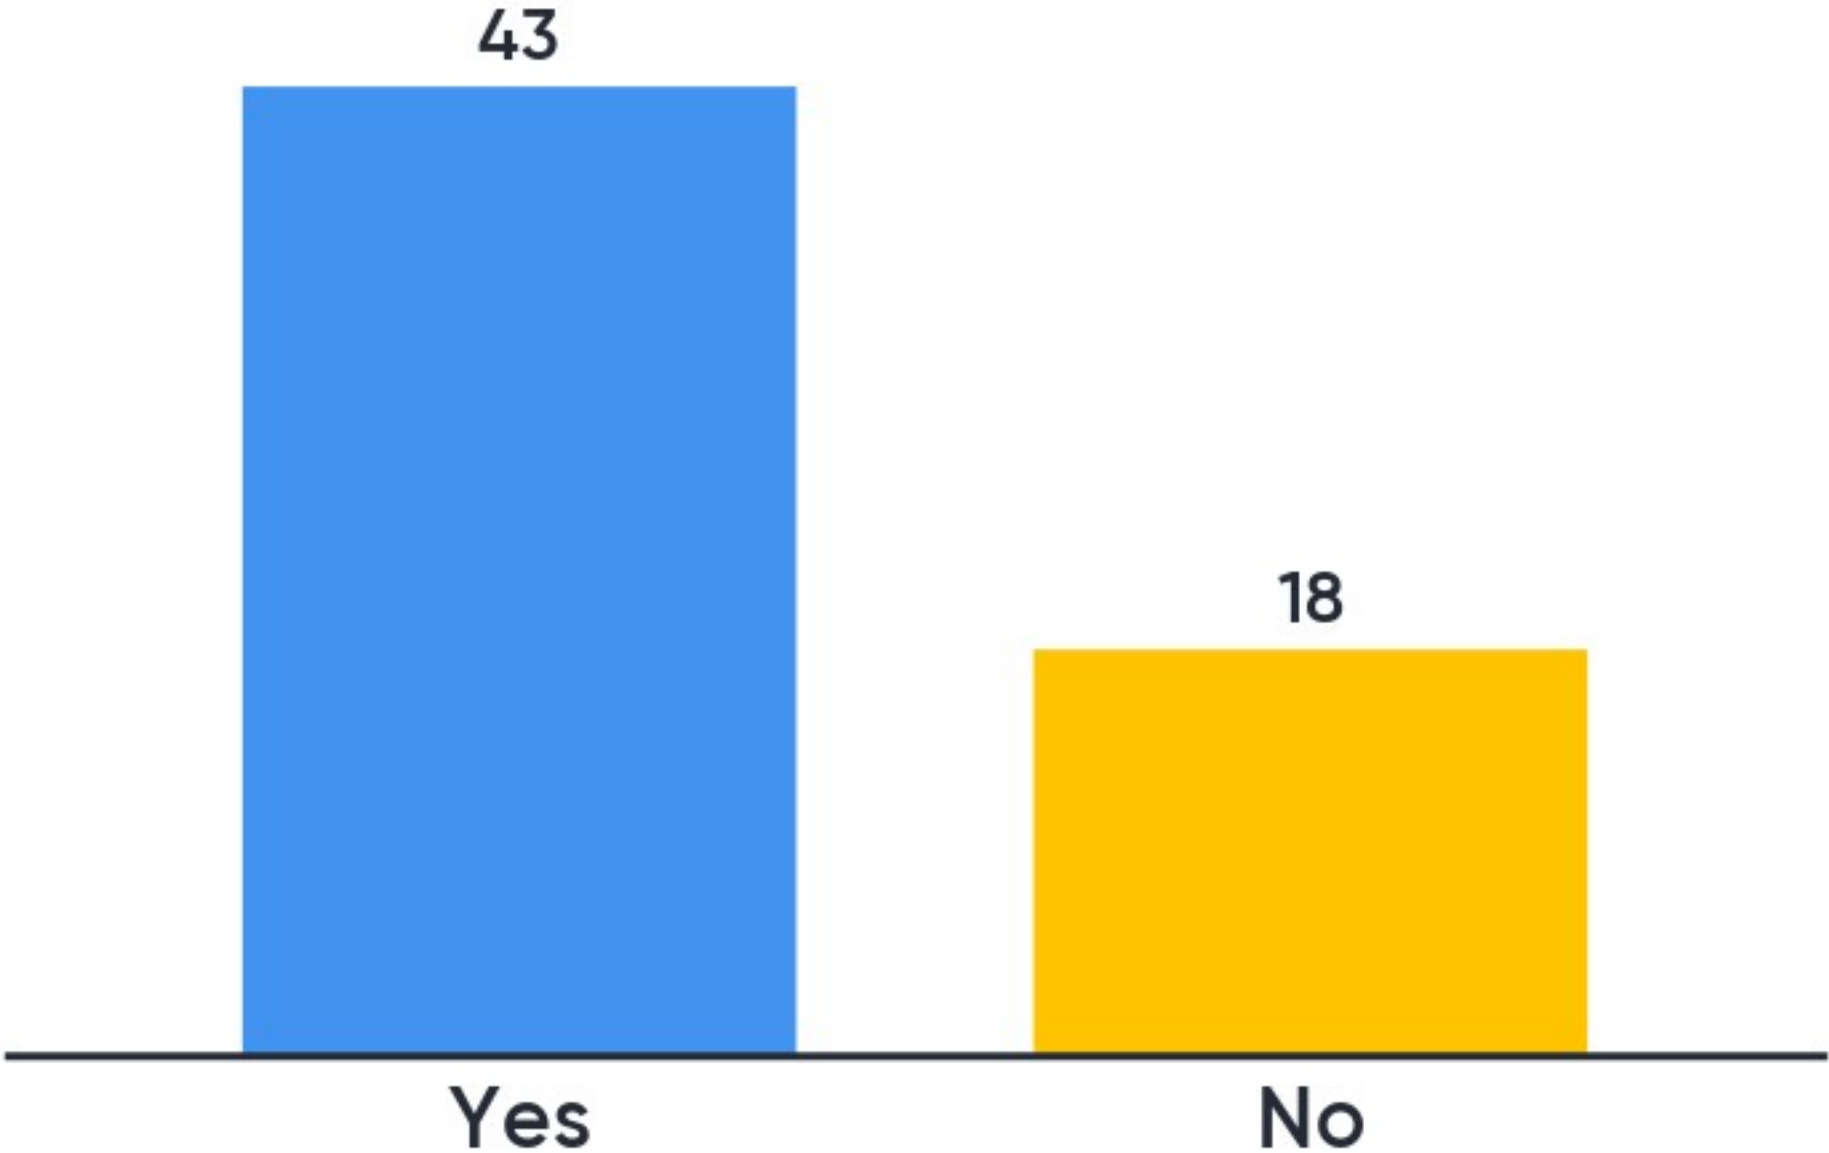

Philosophers, not engineers, are the *real* experts on safety

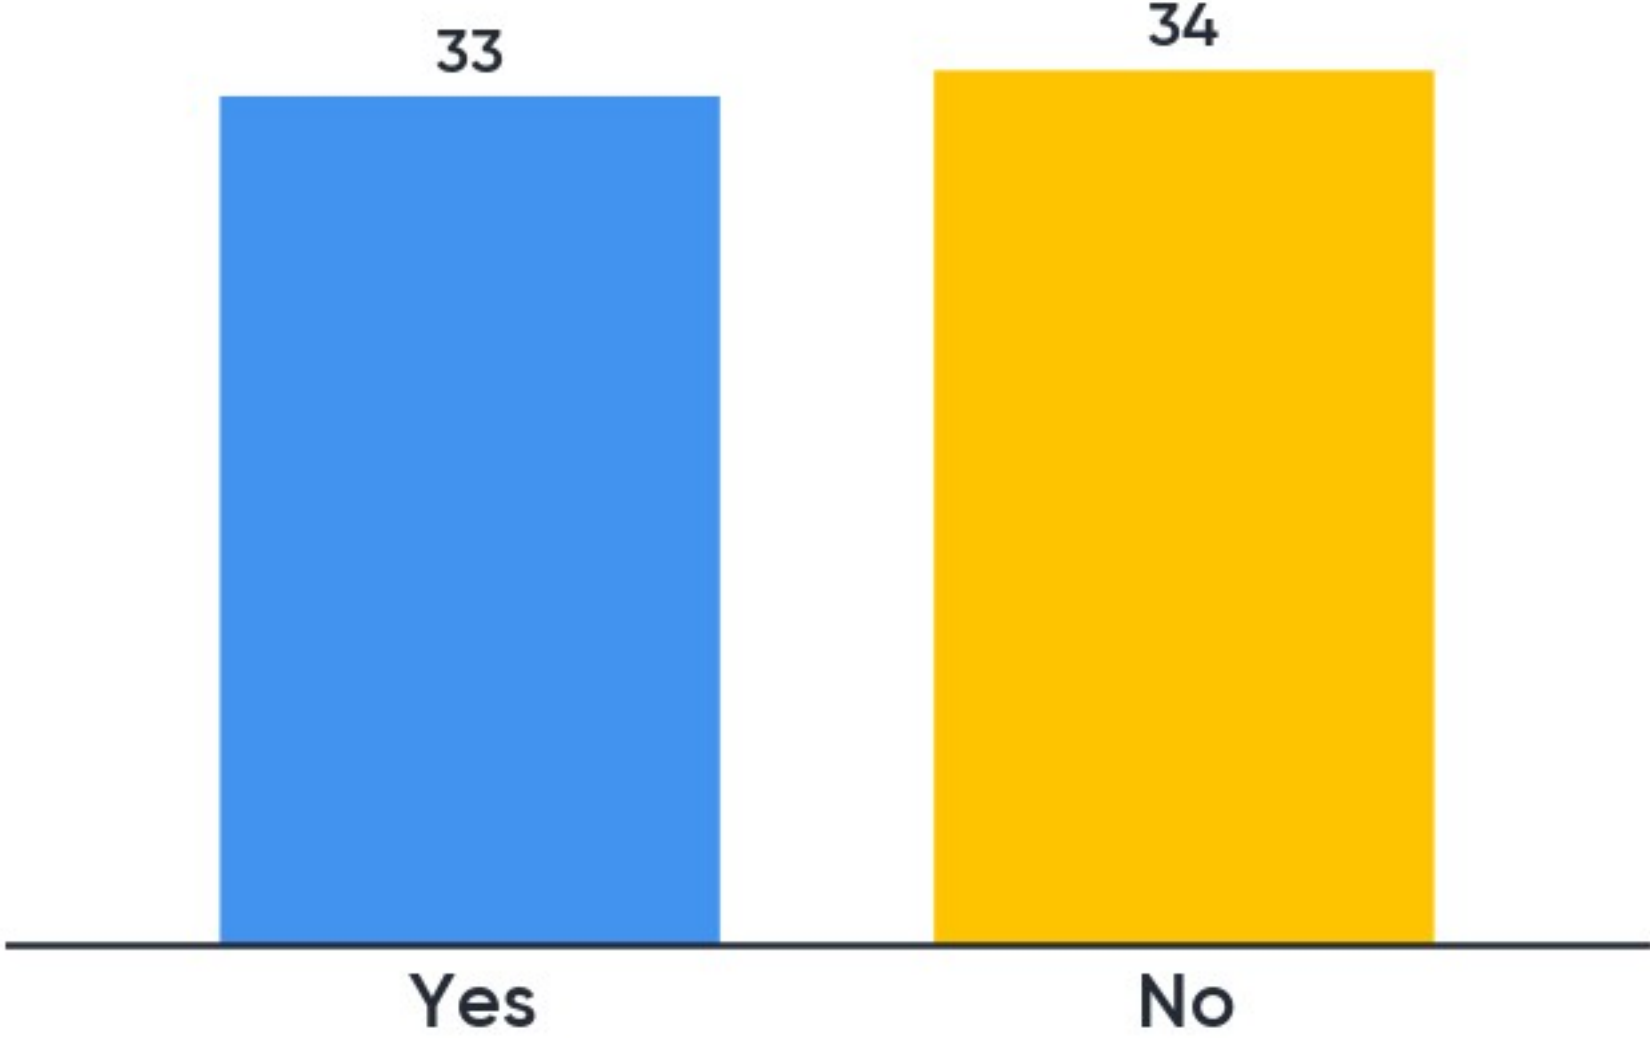

Accidents are a necessary evil to prevent complacency

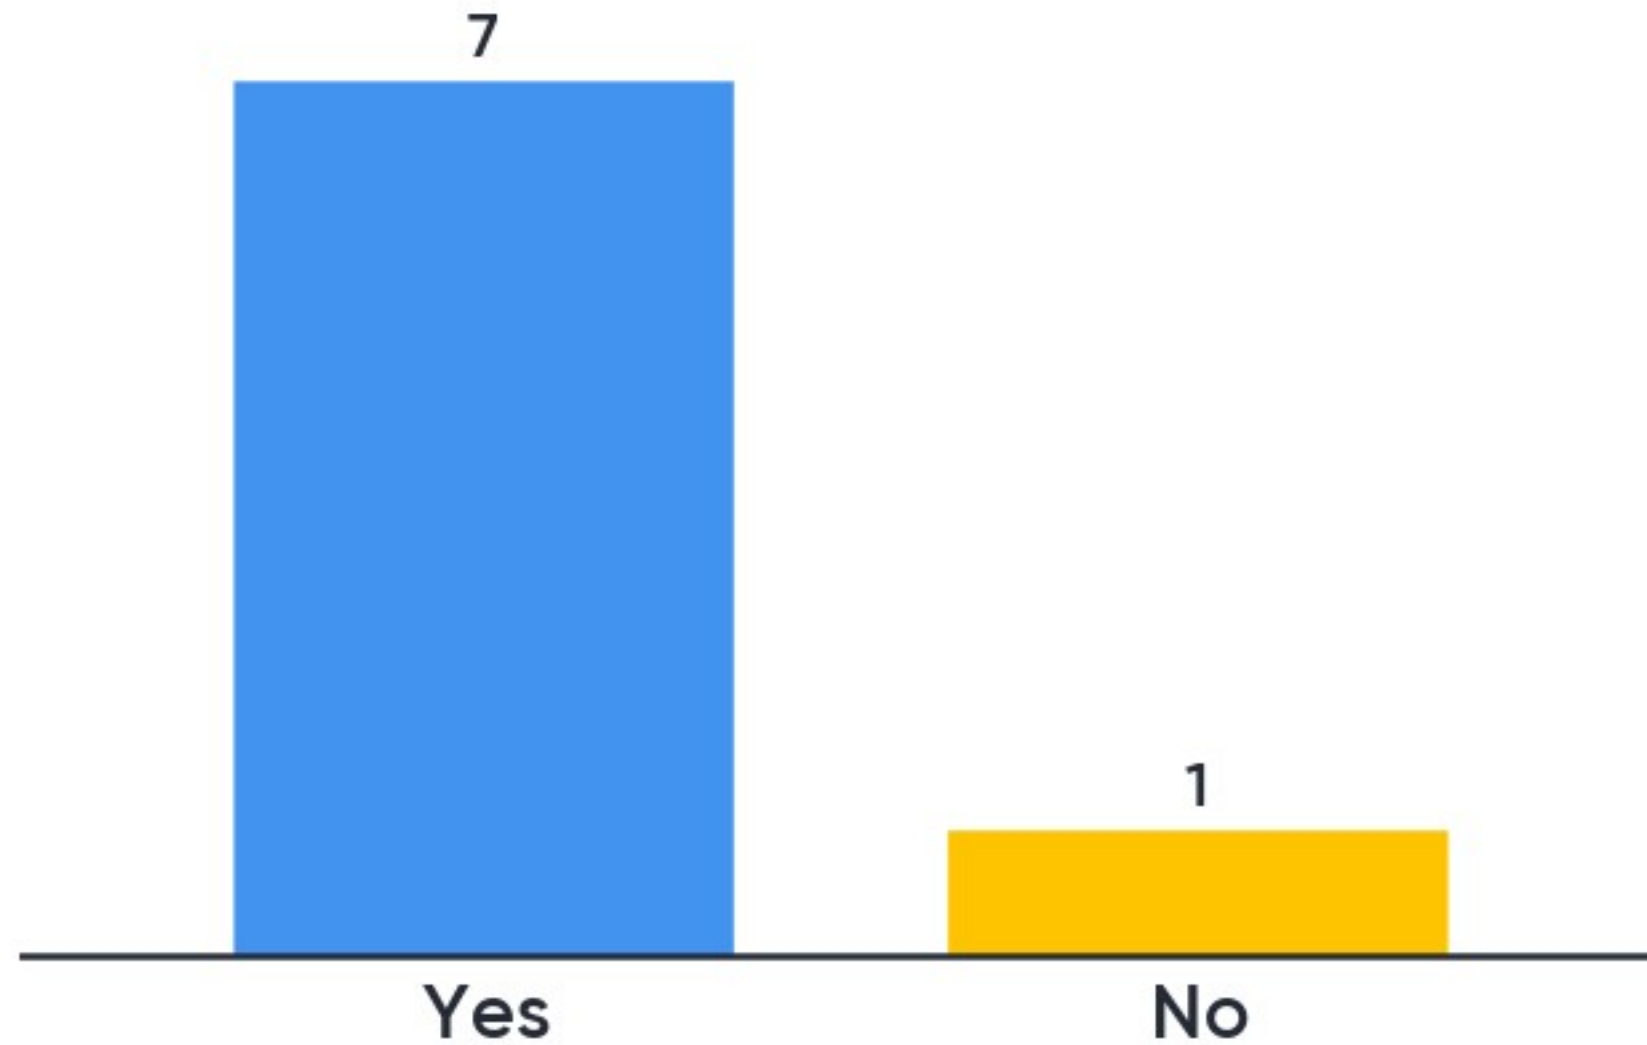

Are the lessons of Haddon-Cave being lost?

Will the Boeing 737 MAX be the next Haddon-Cave report?

Is requirements engineering *still* being neglected in safety critical systems?

Is software design outpacing safety analysis?

Will modelling and simulation eventually replace physical testing?

Can safety critical software be safely produced using Agile?

How good is the organisational safety culture in these industries?
